

Glossary J

[Return to main Glossary index](#)

Java

This is a software programming system popular with web site developers and web based application developers. The end user must have a Java runtime package loaded on their computer and integrated to their web browser to utilize Java applications. Java runtime packages can be obtained from Oracle.com as Java Standard Edition JDK, or as open source from openjdk.java.net as OpenJDK.

JMRI

The Java Model Railroad Interface (JMRI) project is building control and automation tools for model railroad computer control. JMRI is intended as a web interface for hobbyists who want to control their layouts with a computer without having to create an entire software system from scratch. JMRI has interfaces to many popular model railroad system, including train control from the MERG group.
