CBUS - A universal layout control system

Documentation
Schema files
Index to other public Wiki pages

Introduction

CBUS is a Layout Control System running on the CAN (Controller Area Network). A description of the system can be found on our public webpages. cbus.php and cbus2.php

Tools:

- **FCU**: Windows based FLiM Configuration Utility for configuration of nodes and events.
- **JMRI**: Java Model Railroad Interface for configuration, monitoring and operating.
- **ROCRAIL**: A complete package for layout and loco operation.
- **SSI** (Solid State Interlocker) from GPPSOFT: A complete layout control system following British signalling and control practice.

- A complete description of CBUS including the full specification and implementation notes is contained in the 'Developer's Guide' which can be downloaded from
  developer_6b.pdf
  See also the 'documentation' link at the top of this page.
